

December 27, 1831.

William Clift, Esq. in the Chair.

Mr. Vigors reported that the Resolution agreed to at the last Meeting of the Committee had been communicated to the Council : that the Council, fully concurring in the propriety of instituting the experiments suggested therein, had directed that they should be tried on two Leopards, two Ocelots, and two Hyænas : and that instructions had been accordingly given to the Head-keeper to carry them into effect.

A collection of animals preserved in spirit, and recently presented to the Society by Charles Barclay, Esq., was exhibited. It was collected by Charles Telfair, Esq., of the Mauritius, Corr. Memb. Z. S., and contained specimens of *Mammalia*, Fishes, Reptiles, and Insects. Among the former were individuals of two species of *Tenrec*, *Centenes*, Illig., which were pointed out as the *Cent. setosus* and *Cent. semispinosus*, and reference was made to the habits of the animals of this genus as described by Mr. Telfair in a communication read to the Committee on June 14 (p. 89). The apparently good state of preservation of the specimens authorized the hope that their anatomical structure might be properly investigated.

The remaining portion of the collection of *Fishes* formed at the Mauritius by Charles Telfair, Esq., Corr. Memb. Z. S., and presented by him to the Society, was exhibited. The species contained in it were brought in succession under the notice of the Committee by Mr. Bennett, who pointed out more particularly those which he believed to be new to science. As such he named and characterized the following :

**SCOLOPSIDES PHÆOPS.** *Scol. lobis pinnæ caudalis filamentosis : rostro superciliisque alepidotis, nigrescentibus, illo vittâ argenteâ infra oculum productâ infernè marginato ; lineâ obliquâ pallidè argenteâ ab oculo ad præoperculi angulum decurrente ; operculo toto squamato ; vittâ dorsali utrinque argenteâ supra lineam lateralem ; caudâ supernè maculâ nigrescenti notatâ.*

D.  $\frac{1}{2}$ . A.  $\frac{3}{7}$  &c.

*Scol. fræuato*, Cuv. & Val., videtur maximè affinis. Differt vittâ dorsali argenteâ et operculo toto squamato.

**AMPHIPRION FUSCIVENTER.** *Amph. niger, ventre parum pallidiori ; fasciâ angustâ operculari, alterâ lateralî mediâ, tertiadâ obsoletâ caudali albis ; pinnâ caudali posticè pinnarumque dorsalis analisque parte molli albo fimbriatis ; pinnis ventralibus internè dimidiatim flavis.*

D.  $\frac{1}{2}$ . A.  $\frac{3}{7}$  &c.

[No. XIV.] ZOOL. SOC. PROCEEDINGS OF THE COMM. OF SCIENCE.

*Amph. chrysogastri*, Cuv. & Val., simillimus. Differt ventre, pinnis pectoralibus, ventraliumque dimidio externo corpori concoloribus.

OBS. In *Amph. chrysogastre* radii spinosi pinnæ dorsalis variant 10 vel 11.

Fam. MUGILIDÆ.

Genus AGONOSTOMUS.

*Rostrum subproductum.*

*Os inferum.*

*Dentes in utrâque maxillâ minimi, acuti, pluriseriati.*

*Maxilla inferior rotundata.*

Genus *Mugili*, Linn., maximè affiné. Formâ et pinnis simillimum. Differt tantummodo figurâ et situ oris, dentibusque pluriseriatis.

AGONOSTOMUS TELFAIRII. *Ag. suprà nigrescens, infrà fusco-argenteus.*

D. 4,  $\frac{1}{2}$ . A.  $\frac{2}{3}$ . P. 14.

ATHERINA AFFINIS. *Ath. pinnis pectoralibus caudalique apicem versus nigro irroratis.*

D. 5, 11. A. 15.

Affinis, ut videtur, *Ath. Neso-Gallicæ*, Cuv. Differt numero radiorum a figurâ Cepedianâ.

GOBIUS COALITUS. *Gob. pinnis dorsalibus subcontinuis, 2dâ priore paullo altiore: brunneus, nigrescenti maculatus cæruleoque punctatus, punctis ventralibus caudalibusque longitudinaliter seriatis; pinnis cinereis, radii nigrescenti punctatis.*

D. 6, 10. A. 8. P. 16.

*Gob. Giuri*, Ham., ut videtur, affinis.

ELEOTRIS MAURITIANUS. *El. niger; pinnâ caudali rotundatâ; dorsali 2dâ priore altiore.*

D. 6, 9. A. 9. P. 14.

An verè distinctus ab *El. nigricante*, Quoy et Gaim.? Membrana branchiostega maxima, infra operculum longè latèque producta, membranæ lateris oppositi marginem internum tegente.

LABRUS AXILLARIS. *Labr. rostro subproducto; pinnæ dorsalis (per partem spinosam) membranâ profundè excisâ; pinnâ caudali rotundatâ: anticè et ad dorsum brunneus, infrâ posticèque pallidè fuscus; maculâ rotundâ ad basin pinnarum pectoralium, secundâ irregulari ad initium pinnæ dorsalis, tertid ad apicem radiorum quatuor priorum mollium ejusdem pinnæ, quartâque ad apicem radiorum sex priorum mollium pinnæ analis atris; hâc (pinnâ) præterea pinnisque ventralibus nigrescenti guttatis; caudali pectoralibusque flavescentibus immaculatis, illâ nigrescenti supernè infernèque marginatâ: dentibus quatuor anterioribus in utrâque maxillâ majoribus, alteroque magno ad commissuram utrinque.*

D.  $\frac{4}{3}$ . A.  $\frac{3}{2}$ .

Formâ, incisurâ membranæ pinnæ dorsalis, numero radiorum, dentibusque *Labr. Dianam*, LaCép., refert: coloribus omnino differt.

LABRUS LEUCOSTICTICUS. *Labr. pinnâ caudali sublunatâ: aurantiacus?; maculis dorsalibus parvis albis utrinque quatuor; axilla punctisque numerosis subseriatis humeralibus nigris.*

D.  $\frac{4}{3}$ . A.  $\frac{3}{2}$ .

Præcedenti affinis; cui similis formâ (præter caudalis pinnæ), dentibus, numero radiorum, &c.

**CHEILINUS PUNCTATUS.** *Cheil. fuscus*, anticè virescens; capite supernè rubro lituratim vario; genis pectoreque fulvo-guttatis; corpore miniaceo lineatim punctato; pinnis pectoralibus rotundatis flavidis, axillis miniaceis; dorsali fuscâ, purpureo sparsim punctatâ, ad marginem posticèque latè, rubrâ, vittâ intra marginem punctisque plurimis cœruleis; ventralibus elongatis purpureis; anali saturatè miniacea, intra marginem cœruleo vittatâ; caudali rotundata versus apicem rubra ibique ocellis minutioribus cœruleis numerosis ornatâ: dentibus viridibus, duobus intermediis maxillæ inferioris unoque laterali anticè utrinque maxillæ superioris maximis.

D.  $\frac{1}{2}$ . A.  $\frac{2}{3}$ . P. 11. C. 11.

Affinis, ut videtur, *Cheil. lunulato*, Cuv., (*Labrus lunulatus*, Forsk.). Differt egregiè coloribus.

*Var.* Pinnis anali caudali parteque dorsalis molli posticè viridibus. Picturâ Sparo chloruro, Bl. haud absimilis; sed forma pinnæ caudalis maximè diversa.

**CHEILINUS COMMERSONII.** *Cheil. pinnâ caudali rotundatâ*: fuscescenti-brunneus; pinnis anali caudali dorsalisque parte molli viridibus; capite pone et ante oculos vittato; operculo præoperculoque castaneo obliquè lineatis; dentibus duobus anterioribus in utrâque maxillâ maximis, maxillæ superioris exterioribus.

D.  $\frac{1}{2}$ . A.  $\frac{2}{3}$ .

Maximè affinis videtur *Cheil. Diagramma*, Cuv., (*Labrus Diagramma*, LaCép.): Differt præcipue numero radiorum.

**JULIS SCAPULARIS.** *Julis pinnâ caudali rotundatû*: capitis rivulis, corporis lunulis, tæniâ pectorali pône pinnas obliquè ad ventrem ductâ, vittâque pinnæ analis roseis; pinnis dorsali caudalique roseis, huc cœruleo transversim rivulatâ, illâ lunulis baseos, vitta mediâ, apiceque partis mollis cœruleis; pinnâ pectorali hyalinâ, ad basin flavidâ; vittâ latâ humerali, ad apicem pinnæ pectoralis truncata, nigrâ.

D.  $\frac{1}{2}$ . A.  $\frac{2}{3}$ .

**JULIS BICATENATUS.** *Julis pinnâ caudali quadratâ*: capite dorsoque viridibus?; lateribus rubris, tæniis utrinque duabus e serie macularum grisearum oblongarum transversalium constantibus ornatis; pinnis dorsali analique flavo ad apicem latè vittatis; caudalis apice flavo; pectorali nigra, maculâ magnâ basali marginem inferiorem attingente aurantiacâ; ventralibus flavidis.

D.  $\frac{1}{2}$ . A.  $\frac{2}{3}$ .

**CRENIBRURUS ANTHIOÏDES.** *Cren.* capite brevi, fronte subdeclivi; pinnâ caudali hirundinacea: capite nigro; corpore aurantiaco; caudâ flava, suprà infrâque vittâ latâ nigrâ per caudalis pinnæ margines excurrente notatâ; pinnâ dorsali maculâ anticâ plagâque latâ posticâ partis spinosæ anticâque partis mollis nigris insignitâ.

D.  $\frac{1}{2}$ . A.  $\frac{2}{3}$ .

**CYPRINUS MAURITIANUS.** *Cypr.* ore haud barbato; pinnâ caudali lunata; anali breviore; corpore subalto, subcompresso; squamis

*majoribus: suprà plumbeus, infrà argenteus; pinnis, præsertim  
versus apices, nigricantibus.*

D.  $\frac{9}{17}$ . A.  $\frac{2}{5}$ . C. 19. P. 19. V. 9.

**CLUPEA DELICATULA.** *Clup. elongata, lata; pinná dorsali in equi-  
librio positá; ventralibus sub basin posicam dorsalis.*

D. 11. A. 9.

Numero radiorum parvo a congeneribus differt. Corporis longitudo  
in specimine parvo (3-poll.) sextuplo altitudinem superat.

**ENGRAULIS NESO-GALLICUS.** *Engr. elongatus, compressus, ventre  
serrato: suprà plumbeus, infrà et ad latera argenteus.*

D. 14. A. 32. V. 7. P. 14.

**BELONE PLATYURA.** *Bel. dorso subplano; caudú depressú, (altitu-  
dine latitudinis dimidio subæquali); pinná caudali bifurcá; pinnis  
dorsali analique subelongatis, anticè falcatis, anali longiore: suprà  
plumbeo-virescens, infrà dimidiati argenteo-flavicans.*

D. 14. A. 18. P. 12.

Long. rictūs, 4 poll.; a rictu ad orbitam, 4 lin.; orbitæ, 8 lin.;  
operculi, 1 poll.; pinnæ pectoralis, 1 poll. 5 lin.; pinnæ dorsalis, 1 poll.  
9 lin.; alt. ejusdem pinnæ, 1 poll.; long. pinnæ analis, 2 poll. 2 lin.;  
alt. ejusdem, 1 poll. 2 lin.; long. tot. 20 poll.

**RHOMBUS PARVIMANUS.** *Rhomb. oculis sinistris parum distantibus,  
interstitio excavato: fusco nigrescentique marmoratim varius, gut-  
tisque pallidis parvis adspersus.*

P. 10.

Formâ et picturâ *Rhomb. mancum*, Cuv., (*Pleuronectes mancus*,  
Brouss.,) refert, sed os inerme oculique approximati.

**CONGER FLAVIPINNATUS.** *Cong. dentibus maxillæ superioris ante-  
rioribus tantum, vomeris ossiumque palatinorum minimis in areis  
tribus latis asperis dispositis; pinná dorsali suprà medium pectora-  
lum incipiente; linea laterali conspicuâ, impressâ: pinnis omnibus  
flavis, anali posticè dorsalique nigro marginatis, hâc insuper ad  
basin fuscenscente.*

P. 15.

**MURÆNA FIMBRIATA.** *Mur. dentibus maxillaribus acutis uni-seriatis,  
anterioribus longioribus; vomerini anticis duobus elongatis acutis:  
castaneus; nigro subseriatim crebrè guttatus, pinnarum guttis ali-  
quando in fascias confluentibus; pinnis flavo fimbriatis.*

**BALISTES AUROMARGINATUS.** *Bal. ovalis; squamis omnibus, præter  
capitis dorsique anterioris, tuberculo parvo subspinoso armatis;  
pinná caudali subquadratâ, supernè infernèque paullum productâ:  
nigrescens, pinnarum dorsalis 2dæ analisque anticè falcatarum  
marginibus, caudalique marginibus apice guttûque subbasali, flavis.*

D. 3, 28. A. 25. P. 13. C. 12.

Coloribus *Bal. flavimarginato*, Rupp., similis: differt armaturâ  
caudæ. Lateribus corporeoque toto posticè spinoso-scabris convenit  
cum *Bal. Willughbeii*, Benn., (*Guaperua longa*, Will., Ichth., tab. I.  
20); cui tamen formâ corporis pinnarumque valde dissimilis.

**BALISTES LIMA.** *Bal. ovalis, fuscus; squamis omnibus, præter  
capitis dorsique anterioris, in medio pallidioribus tuberculatisque;  
pinná caudali subquadratâ, in medio, supernè et infernè paullum*

*productā; pinnarum dorsalis 2dæ analisque anticē magis elevatārum fimbriā, caudaliske marginis fasciā lunatā, nigrescentibus.*

D. 1?, 29. A. 26. P. 13.

Præcedenti valdè affinis; sed pictura alia, pinnæ anticē minūs elevatæ, numerusque radiorum paullo major.

**BALISTES MITIS.** *Bal. latè ovalis; pinnd caudali rotundatā, extremitatibus pullum productis; seriebus septem vel octo aculeorum caudalium minimorum: pallidè brunneus, pallidiori varius.*

D. 3, 30. A. 28. P. 15. C. 12.

Mr. Bennett availed himself of the opportunity to remark that the *Serranus*, characterized by him from this collection on the 23rd of August, as the *Serr. Telfairii* (p. 127), had been described about the same time by MM. Cuvier and Valenciennes under the name of *Serr. argyro-grammicus*. He also stated, that those eminent zoologists having used as the designation of a distinct genus of *Scombridae* from that to which he had applied it (p. 146), the classical name *Apolectus*, he proposed, with the view of preventing confusion, to apply to the group indicated by him the name of *Apodontis*.

Mr. Bennett subsequently observed, that the *Birds* described by him (p. 13), had during the summer completed the change of their plumage, and had thereby assumed the full adult characters of the *Angola Vulture* of Pennant, *Vultur Angolensis*, Gmel. The *Polyborus?* *hypoleucus* sinks therefore into a synonym, and the description of it is that of the *Angola Vulture* in its change from immature to adult plumage.

Mr. Owen read the following additional Notes on the anatomy of *Crocodilus acutus*, Cuv., taken at the dissection of the female of that species, which lately died at the Society's Gardens.

"The same subdivision of the serous membranes, as was noticed in the dissection of the male (p. 139), was again observed; and in addition to those cavities previously described, another distinct one was found between the back part of the liver and *aesophagus*.

"The interior of the stomach did not present the distinct patches observable in the previous dissection (and still obvious in the preparation), which must therefore be considered as an accidental variety: but the lining membrane was a smooth uniform villous surface, stained of a yellow colour, and highly vascular, as is proved by injection of size and vermillion.

"The small intestines presented a dilatation immediately beyond the folds of the *duodenum*; which is most probably a normal structure, and not depending on the accumulation of *flatus*, as was supposed in the dissection of the male.

"The spleen was in the same relative situation, and exhibited the same loose mode of connection, but the process of *peritoneum* was somewhat broader. On holding it up to the light an equally satisfactory view of its contents was obtained; and I am therefore inclined to consider it an *experimentum crucis* on the negative side of the question regarding the duct of the spleen.
